

Sukkur IBA University

Department of Computer Science

LAB 01

Software Construction & Development

LAB Objectives:

- Students will be able to know basics of programming in Java which leads in software construction and development
- familiar with coding standards and naming conventions in Java
- to develop code which is free from errors which include syntax, compile time , logical errors and runtime errors
- To cover up basic programming task in Java using variables, loops, arrays and methods.

Lab Activities

Task 01: Take 2 numbers from the console, your program must swap them without third variable and display on console.

Task 02: create a program in which user may enter any symbol, program must display the ASCII of that code.

Task 03: Use switch case to show user whether a user entered letter is a vowel or consonant or other symbol.

Task 04: Create “PIN CODE ATM Verification Code”. Use the do while loop and allow user to enter maximum 3 times for the pin code. If on the first attempt it is correct then show welcome screen. In rest of wrong pin code, allow other 2 times to insert pin code.

[Hint: You may set a pin code of your choice which is to be checked. e.g; 5544]

Task 05: Create an array of 5 symbols, display it in reverse order.

Sukkur IBA University

Task 06: Find the value of a particular number from the array. Assume its size is 10.

Task 7: Create 2 d arrays, print the diagonal values using loops.
